Below is the short update for Mike.

On April 15th, EPA met with the Navy, along with our state regulatory partners DTSC and CDPH. We discussed EPA's April 11th letter to the Navy which proposed a path forward to start field work, and we advised the Navy on the next steps to begin the soil reference background testing outside of Parcel G. EPA clarified our approach to evaluate the protectiveness of the remedy by using two different risk assessment tools: EPA's PRG Calculator and the Department of Energy's RESRAD family of codes. We underscored the most efficient approach would be to continue with EPA's PRG Calculator on areas where we are in close agreement. On May 2nd, EPA and the Navy will meet again to understand how the Navy plans to implement our proposed path forward.

Enrique,

Can you give me a simple summary
of outcome of mtg with Navy that I
can forward to Robert. Thx.
